15. AB Ltd manufactures two products A and B. To manufacture one unit of A, two units of material $X$ and 4 units of material $Y$ are required. To manufacture one unit of $B$, three units of $X$ and two units of Y is required. As the raw material X is in short supply, not more than 16 units of X can be used. Atleast 16 units of material Y must be used in order to meet committed sales of A and B. Cost per unit of material X and Y are Rs. 2.5 and Rs. 25 respectively. You are required to formulate mathematical model and solve it for minimum cot graphically.
16. Using the following cost matrix determine the job assignment :

## Section C

Answer any three questions.
Each question carries a weight of 5 .
17. Discuss the application of MODI in determine the optimum solution.
18. A small project is composed of seven activities whose time estimates are listed in the table as follows:

| Activity | Estimated duration(weeks) |  |  |
| :--- | :---: | :---: | :---: |
|  | Optimistic | Most likely | Pessimistic |
| $1-2$ | 1 | 1 | 7 |

| $3-5$ | 2 | 5 | 14 |
| $4-6$ | 2 | 5 | 8 |
| $5-6$ | 3 | 6 | 15 |

You are required to :
1 Draw the project network.
2 Find the expected duration and variance of each activity.
3 Calculate the variance and standard deviation of project length.
19. A department head has four subordinates and four task need to be performed. The subordinates differ in efficiency and the tasks differ in their intrinsic difficulty. His estimate of the time each man would take to perform each task is given in the matrix below :

|  | Men |  |  |  |
| :---: | :---: | :---: | :---: | :---: |

How should the task be allotted to men so as to minimise the total man hours?
20. Use the simplex method to solve LPP :

Maximise $\mathrm{Z}=7_{x 1}+5_{x 2}$
